

PTF Installation Process

- At PTF we are committed to delivering you the 'right' timber floor. Taking into consideration the location, style, purpose, budget, and expected performance so that you are completely satisfied with your new timber floor. Perfect!
- PTF are specialists in managing the total process from helping you select the right type of floor to suit your needs, through to effectively managing the installation process
- It is essential that the substructure (sub floor) is level and sound and not subject to movement or moisture. PTF will repair the sub-structure if necessary, which could involve sanding an existing timber sub-floor or leveling and grinding your concrete sub-floor
- Our Installation Process includes:
 - ATFA trained installers
 - Qualified timber craftsmen
 - Only PTF Certified products are used
 - Public Liability Insurance
 - Guarantee on all works
 - Installers are PTF Certified

Installing your new Timber floor. Perfect!

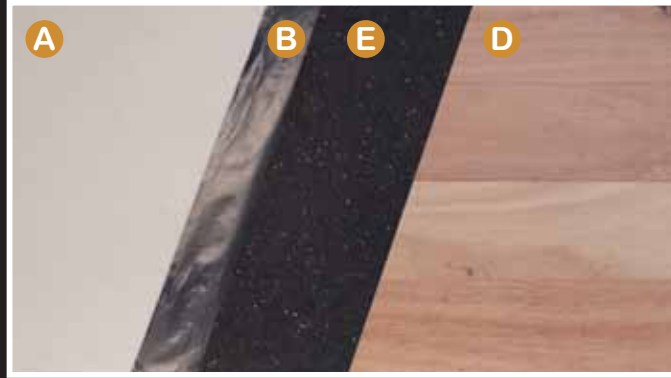

The PTF Installation Process.

Pre-finished engineered timber floor (Standard installation)

Pre-finished engineered timber floor (Acoustic installation)

Pre-finished engineered timber floor (Direct stick process)

Installation Reference

- A** Concrete or other sub-floor
- B** Black plastic underlay
- C** Standard Foam underlay
- D** Installation = floating
- E** Acoustic rubber underlay (3mm)
- F** Moisture barrier (Not required on timber sub-floor)
- G** Glue
- H** Installation = direct stick
- I** Plywood
- J** Installation = secret nail and glue

Traditional solid timber floor (Concrete slab)

Note: Installation on timber sub floor (i.e. yellow tongue) delete steps B,C

Traditional parquetry timber floor (Concrete slab)

Note: Installation on timber sub floor (i.e. yellow tongue) delete step B

PTF installers always ensure that the sub floor is a flat and even surface, this requires a specific sub floor checking procedure. If leveling is required this will incur additional charges.
